

Metal Stake

In addition to bamboo sticks, we also offer metal stakes. The metal plant stake is a green stick made of metal with a plastic cover. It is used for supporting garden plants. The advantage of these stakes is that they last very long and are therefore durable in use. The stick is light in weight, but at the same time extremely sturdy. Because it is pointed, it sticks easily into the ground.

The metal stake is available in all possible lengths and thicknesses.
